

FBench – Defining and Optimizing OpenCL Benchmarks for FPGAs

Tobias Kenter, Christian Plessl, Marius Meyer

High-Performance IT Systems group

Paderborn University, Germany Paderborn Center for Parallel Computing

Project Group Presentation, Paderborn, 8 July 2019

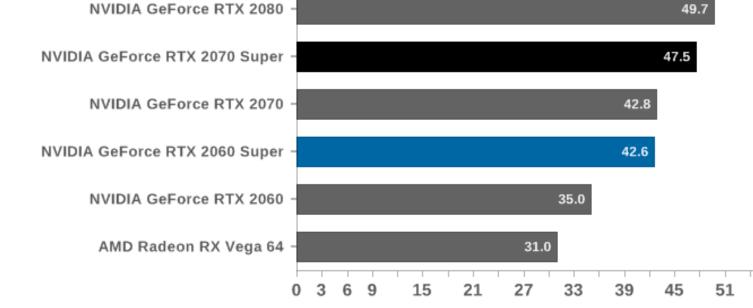

Benchmarks (1)

- Characterize system performance
- Make informed purchase decisions

Know your workload?

Look up the numbers!

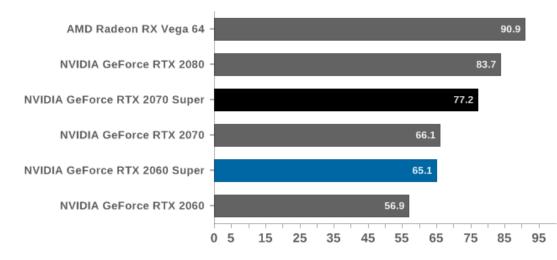

https://www.anandtech.com/show/14586/geforce-rtx-2070-super-rtx-2060-super-review/11

Benchmarks (2)

Don't know your workload?

- Checkout all results
- Weight them in some way...

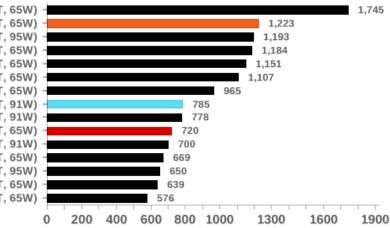

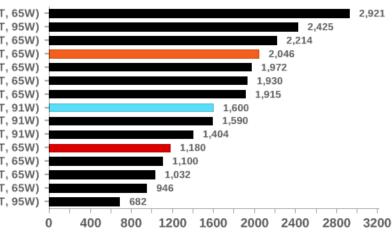

3D Particle Movement v2.1 Score (Higher is Better)

AMD Ryzen 5 2600 (6C/12T, 65W) AMD Ryzen 5 2500X (4C/8T, 65W) Intel Core i5-8600K (6C/6T, 95W) AMD Ryzen 5 2400G (4C/8T, 65W) AMD Ryzen 5 1500X (4C/8T, 65W) Intel Core i5-8400 (6C/6T, 65W) Intel Core i5-8305G (4C/8T, 65W) Intel Core i5-8305G (4C/4T, 65W) Intel Core i5-7600K (4C/4T, 91W) Intel Core i5-6600K (4C/4T, 91W) AMD Ryzen 3 2300X (4C/4T, 65W) Intel Core i5-2500K (4C/4T, 95W) Intel Core i5-2500K (4C/4T, 65W) AMD Ryzen 3 1200 (4C/4T, 65W) -

3D Particle Movement v2.1 (with AVX) Score (Higher is Better)

Benchmarks and System Characteristics

Standard benchmarks don't cover all important system characteristics

Benchmarks in HPC (2)

Benchmarks covering full workloads

CORAL 2: <u>https://asc.llnl.gov/coral-2-benchmarks/</u>

Scalable Science	Lines	Parallelism			Language				Code Description/Notes			
Benchmarks	of Code	MPI	OpenMP/ Pthreads	GPU	Fortran	Python	с	C++				
HACC • source • summary • baseline GPU version: No	35,000	x	Х	X				x	The Hardware Accelerated Cosmology Code (HACC) framework uses N-body techniques to simulate the formation of structure in collisionless fluids under the influence of gravity in an expanding universe. It depends on external FFT library and is typically compute limited achieving 13.92 Petaflops, 69.2% of machine peak on Sequoia.			
Nekbone • source • summary • baseline GPU version: No	48,000	x		X	X		x		Nekbone is a mini-app derived from the Nek5000 CFD code which is a high order, incompressible Navier- Stokes CFD solver based on the spectral element method. The conjugate gradiant solve is compute intense, contains small messages and frequent allreduces.			
QMCPACK • source • summary • baseline GPU version: Yes	200.000	x	x	X			x	x	QMCPACK is a many-body ab initio quantum Monte Carlo code for computing the electronic structure of atoms, molecules, and solids. It is written primarily in C++, and its use of template metaprogramming is known to stress compilers. When run in production, the code is memory bandwidth sensitive, while still needing thread efficiency to realize good performance.			
LAMMPS • source • summary • baseline GPU version: Yes	500,000	x	x	Х			х	х	LAMMPS is a classical molecular dynamics code. Performance limiters will depend on the problem chosen and could include, compute, memory bandwidth, network bandwidth, and network latency.			

Tier-1 Benchmark Information

Specialized architectures in HPC

- Hardware architectures in Supercomputing diversify
 - GPUs
 - manycore CPUs
 - FPGAs
- Multiple architectures are combined to heterogenous systems to increase Performance in HPC
- Paderborn is at forefront of FPGA accelerators in HPC

Rank	System	Cores	Rmax (TFlop/s)	Rpeak (TFlop/s)	Power (kW)
1	Summit - IBM Power System AC922, IBM POWER9 22C 3.07GHz, NVIDIA Volta GV100, Dual-rail Mellanox EDR Infiniband , IBM D0E/SC/0ak Ridge National Laboratory United States	2,414,592	148,600.0	200,794.9	10,096
2	Sierra - IBM Power System S922LC, IBM POWER9 22C 3.1GHz, NVIDIA Volta GV100, Dual-rail Mellanox EDR Infiniband , IBM / NVIDIA / Mellanox DOE/NNSA/LLNL United States	1,572,480	94,640.0	125,712.0	7,438

Top 4 of the Top500 List (06/2019) (https://www.top500.org/lists/2019/06/)

 \rightarrow Meaningful Benchmarks for FPGAs are missing

Example: Noctua

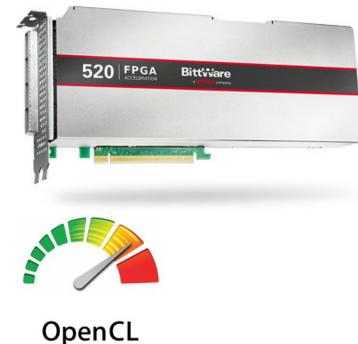

- Inaugurated in September 2018
- Technical Description
 - Cray CS500 system
 - 10880 cores in total
 - 256 compute nodes
 - 2x Intel Xeon Gold "Skylake" 6148 (40 cores)
 - 192 GiB memory
 - 16 FPGA nodes
 - 2x Intel Xeon Gold "Skylake" 6148 (40 cores)
 - 192 GiB memory
 - 2x Intel Stratix 10 FPGA

How to choose the best FPGA card for a next system?

FPGA Utilization

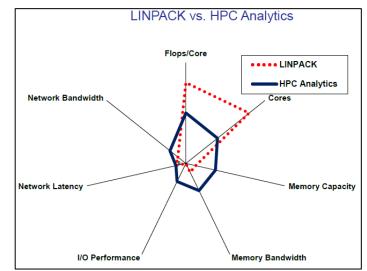

- Configurable hardware
 - Customize operations, connections, data reuse
- OpenCL increase productivity
 - C-like programming language
 - Toolchains available for different FPGA vendors (Intel, Xilinx)
 - Simplifies porting code to different FPGAs
- OpenCL code is used in applications to accelerate compute intensive tasks
 - Which FPGA offers the best performance for these tasks?

The FBench Project Group

- Goals
 - Get familiar with FPGA programming using OpenCL
 - Develop a benchmark suite for FPGA
 - Multiple small benchmarks targeting different performance metrics
- Fields of interest / skills
 - Accelerator architectures and OpenCL
 - Performance Characterization and Comparison
 - Working on remote FPGA machines (Linux, ssh, scripts)
- Supervisors
 - Christian Plessl, christian.plessl (at) uni-paderborn.de
 - Marius Meyer, marius.meyer (at) uni-paderborn.de
 - Tobias Kenter, kenter (at) uni-paderborn.de

Project Goals

- Simple, synthetic benchmarks to cover relevant performance metrics
 - Global memory bandwidth with different access patterns
 - Local memory bandwidth with different data partitions
 - Operations (floating point, integer, logic) using DSPs and LUTs
 - Internal communication on chip, routing limits
 - External communication to other FPGAs
- Benchmark suite that is easy to use
 - Straight forward OpenCL code + documentation
 - Clone repository, type make, get score + explanation
- Optimized benchmark versions for some FPGAs
 - Special variants to perform better than the simple code
- Provide parameters for scaling
 - Peak operations / local memory requires usage of all (~90%) resources

https://www.nextplatform.com/2015/03/19/hpc-scales-out-of-balance-with-cpu-heavy-thinking/

Organization

- Customer role of supervisors for benchmark requirements
 - Can contribute own ideas, but not a completely open project
- Qualification process will require personal initiative
 - Self training with documentation while working on first simple benchmark kernels
 - <u>https://www.intel.com/content/dam/altera-www/global/en_US/pdfs/literature/hb/opencl-sdk/aocl_programming_guide.pdf</u> (208 pages)
 - <u>https://www.intel.com/content/dam/altera-www/global/en_US/pdfs/literature/hb/opencl-sdk/aocl-best-practices-guide.pdf</u> (191 pages)
 - No seminar in first semester
- Mandatory meeting on Friday 9-14 (before HPC lecture)
 - Individual work and meetings on agreement
- Send email with statement of interest + background (see homepage)
 - Additional testing depending on interest, will be announced by August 10
